

A Course of Study for

## PRE-CHIROPRACTIC

Chiropractors diagnose and treat spinal and other health disorders to help their patients regain and maintain good health. They work to prevent disability and to correct abnormalities caused by interference with the nervous system. They manually adjust the spinal column and other parts of the body. They may also use water, light, heat, ultrasound, nutritional, and electric therapy. They use physical examinations, laboratory studies, and x-rays to aid in their diagnosis. Advancement includes teaching and research.

For additional career possibilities, visit the Career Services Center on the main campus to utilize computerized career information systems and other valuable career resources.
